**Re:** Laptop Encryption for MAC's

---

## Laptop Encryption

Per ITS new policy, this is a document to provide details on turning on file vault for all MAC laptops.

- Open System Preferences

- Click on security icon
- Set a master password for the computer (this is different than the users password)

- Turn on file vault

- It will ask the user to create a password to turn file vault on (have them choose something they remember)
- It will take anywhere from 5-60 minutes for file vault to encrypt all the documents
- Upon logging into the system now, users will be required to enter the password they created in the previous step.
